## **WESTINGHOUSE** **COMPACT FLUORESCENT LIGHT BULBS -** **THE FRIENDLY CHOICE IN FLUORESCENT LIGHTING.**

- Westinghouse compact fluorescent light bulbs are economical, long-lasting and environmentally friendly. Switch to compact fluorescent lighting and receive the same warm, soothing color as regular incandescent lighting while saving energy, time and money.
- Compact fluorescent light bulbs last from 8,000 to 10,000 hours versus the 750 hours of a standard incandescent bulb. These long-lasting bulbs will last over five years. (Based on using the bulb four hours per day.)
- Compact fluorescent light bulbs are good for the environment. The reduction of energy consumed by using compact fluorescent light bulbs saves natural resources around us.
- The electronic ballast technology found in Westinghouse compact fluorescent light bulbs eliminates the slow flickering start that other compact fluorescent bulbs experience. The instant start creates instant atmosphere, beauty and savings.
- The increasing popularity of compact fluorescent lighting has led to the introduction of new compact fluorescent lamp types that include a variety of shapes and sizes for use in many applications.
- You can use compact fluorescent light bulbs in your favorite table lamps, floor lamps, ceiling fixtures or wall sconces. They are also perfect for hard-to-reach applications such as security lights, track lighting, recessed lighting and even some outdoor lighting applications.

## **Westinghouse Compact Fluorescent Lamps —** **The Friendly Choice in Fluorescent Lighting**

Westinghouse compact fluorescent lamps are economical, long-lasting and environmentally friendly. Switch to compact fluorescent lighting and receive the same warm, soothing color as regular incandescent lighting while saving energy, time and money.

Compact fluorescent lamps last from 6,000 to 10,000 hours, versus the 750 hours of a standard incandescent lamp. These long-lasting lamps will last over five years (based on using the lamp four hours per day).

Compact fluorescent lamps are good for the environment. The reduction of energy consumed by using compact fluorescent lamps saves natural resources around us.

The electronic ballast technology found in Westinghouse compact fluorescent lamps eliminates the slow flickering start that other compact fluorescent bulbs experience.

The increasing popularity of compact fluorescent lighting has led to the introduction of new compact fluorescent lamp types that include a variety of shapes and sizes for use in many applications.

You can use compact fluorescent lamps in your favorite table lamps, floor lamps, ceiling fixtures and wall sconces. Because compact fluorescent lamps need to be replaced much less frequently, they are also perfect for hard-to-reach applications such as security lights, track lighting, recessed lighting and even some outdoor lighting applications.

# ENERGY STAR® Certification

## What is ENERGY STAR®?

The ENERGY STAR® label stands for superior energy performance. ENERGY STAR® was first introduced by the U.S. Environmental Protection Agency in 1992 as a voluntary labeling program designed to identify and promote energy-efficient products that reduce carbon dioxide emissions. Today, the ENERGY STAR® label has grown in popularity with consumers and is now found on a wide array of products, ranging from computers to home insulation.

Many small and large businesses throughout the country are active supporters of ENERGY STAR® products. In addition to the energy savings and environmental benefits, the ENERGY STAR® program provides goodwill to customers, employees, and local communities.

## ENERGY STAR® is Gaining Awareness!

- Nationwide, 41% of households report having seen the ENERGY STAR® label on products.
- Over 50% of households have a general understanding of the label's message, and of that group, 37% register a high understanding.
- 50% of households who reported buying an ENERGY STAR® qualifying product said that they were favorably influenced by the ENERGY STAR® label.

## Westinghouse is an ENERGY STAR® Manufacturing Partner

As a manufacturer of ENERGY STAR® labeled lamps, Westinghouse encourages every U.S. household to make sure their next lamp is ENERGY STAR® approved.

If every U.S. household in the United States changed the lighting in one room of their home to ENERGY STAR®:

- We would save 857 billion kWh of energy and keep one trillion pounds of greenhouse gases out of the air.
- Our annual energy savings alone would be equivalent to the annual output of more than 21 power plants.
- Our annual savings could power more than 4 million U.S. homes for one year.

Westinghouse is committed to manufacturing products that earn the ENERGY STAR® label, in order to protect the environment while saving energy and money.
